Development Projects

[CoffeeProject](#)

Pair programming project that allows users to search for a desired coffee roast and as well as to add their preferred roast. Coffees can be found by name and roast. Utilizing JavaScript, and Bootstrap users can navigate through the website easily. The structure of the webpage was created with HTML while CSS was the language that describes the presentation of the HTML document.

[Weather Map](#)

Weather Map is an individual project that displays real-time weekly weather reports based on desired input location. API calls to WeatherApp and Mapbox to allow dynamic geographic selection and updates. Developed using JavaScript, CSS, and HTML.

[MovieProject](#)

Pair programming project with flip-card style-page displaying a movie collection with posters. Allows users to search, add, edit and delete movies. Glitch was utilized as a remote JSON file to fetch movies to the project. The structure and design were created with HTML and CSS. Functionally the movie web app was achieved using JavaScript.
